

Sahil Gupta

Full Stack Engineer • Java • Spring Boot • React

stacks.sahil@gmail.com | +91 9653936286 | Gurgaon, India | waahguptaji.in

Skills

Languages: Java, TypeScript, JavaScript, SQL, HTML5, CSS3

Frameworks & Libraries: Spring Boot, React, Next.js, Redux Toolkit, Express.js, Fastify, Prisma ORM

Tools & Infrastructure: PostgreSQL, MySQL, MongoDB, Nginx, PM2, Vercel, Jenkins, Git, Postman

Experience

Assistant System Engineer, Tata Consultancy Services – Gurgaon, Haryana

Oct 2024 – Present

- Developed data mapping endpoints using Spring Boot to optimize internal customer history views, reducing record retrieval latency below a two-second threshold
- Built collateral input tracking components in React to enforce client-side constraint checking, eliminating redundant validation errors across form submissions
- Designed a responsive workflow tracking grid using React to render active loan application queues, successfully supporting concurrent views for over 50 regional operators
- Implemented data pagination streams to process historical transaction sweeps, reducing system memory footprint overhead by 14%

Software Development Engineer, American Chase – Indore, Madhya Pradesh

Feb 2024 – July 2024

- Developed barcode verification fields in React to cross-check real-time material serial numbers, reducing manual data entry submission errors by 18%
- Implemented selector properties using Redux Toolkit to sync status updates across shipping view layouts, removing asynchronous interface display lags
- Refactored logistics dispatch query parameters inside a Node.js controller to apply limit thresholds, dropping search view loading times by 22%

Projects

Spndo

spndo.app

- Engineered a full-stack personal finance platform using Next.js and Fastify to handle end-to-end multi-resource CRUD workflows across a relational PostgreSQL database
- Constructed a centralized frontend API client layer using custom React state wrappers, reducing redundant view layout re-renders by 28% across the core financial dashboard
- Architected a stateless JWT token rotation security layer verified via Fastify hooks, successfully maintaining route isolation during concurrent 300-user automated load tests

Rush Bite

rushbite.vercel.app

- Developed asynchronous restaurant data mapping utilities in React to process third-party live JSON payloads, minimizing initial interface paint latency
- Implemented dynamic location-based search filtering components using Redux Toolkit state slices, eliminating visual layout stutter during user input updates

Education

Medi-Caps University – BTech in Computer Science Engineering

May 2024
